

Pangborn Memorial Airport Master Plan Update

Pangborn Memorial Airport (Airport) plays a vital role in the community and regional economy. To help guide facility and service needs over the next 20 years, the Airport is currently updating its Master Plan. The updated Master Plan will help provide for a safe, efficient facility that is economically viable, financially sustainable, and aligns with regional, state, and national planning goals.

What is an Airport Master Plan?

An Airport Master Plan (Master Plan) evaluates existing airport operations and facilities, forecasts future aviation demand and identifies potential improvements to airport facilities that would be needed to meet future growth. The updated Master Plan will guide development of the facility for the next 20 years.

The updated Master Plan will include recommendations on:

- User activity levels
- Airfield facilities
- Airspace
- Airport infrastructure and utilities
- Airport land use and use of Airport property

Why do we need to update the Master Plan?

The Airport's current Master Plan was last updated in 2004, and FAA regulations recommend updates every ten years. Since the last Master Plan was completed, our community, the aviation industry, and Federal Aviation Administration (FAA) standards and compliances have changed. By updating the Master Plan, we can address these changes, update the airport layout and capital improvement plans, and ensure ongoing compliance with FAA guidelines.

The planning process

As we work through the planning process, we will examine and evaluate several components of airport operations and potential growth. Safe and efficient facility operations always come first, and we will work closely with commercial, general aviation, and military airport users. Other areas of review include ensuring the facility's financial stability and support for regional economic growth, broader regional and state planning goals, and other interests or uses (such as aviation) that are currently located on or off Airport-owned property.

As part of the process, we will evaluate several airport development alternatives to determine how well they meet near- and long-term operational needs, and any potential effects on adjacent properties, economic development and the environment.

Project schedule

The updated Master Plan is scheduled to be complete by December 2017.

Planning Advisory Committee

A Planning Advisory Committee (PAC), comprised of industry and community leaders, will provide guidance and feedback throughout the planning process.

All PAC meetings are open to the public, and their meeting information and materials are available on the Master Plan project webpage (www.flywenatchee.com/master-plan).

We want to hear from you

Throughout the Master Plan process, the Airport will reach out to local residents, business owners, and community organizations to share information and seek input on current operations, future needs, and potential development alternatives. Outreach activities will include in-person meetings and events, online open houses, online surveys, briefings to community organizations, and information booths at local events. Your input is always welcome. If you'd like to schedule a presentation for a group or have input for the project team, please email us at masterplan@pangbornairport.com.
